Burak Gizlice

Data Engineer
Alanya, Antalya, Türkiye

Summary

Computer Engineering student pivoting from web development to data infrastructure. Built production web apps for over a year in a startup environment before transitioning into data analysis through a 9-month internship at a European research facility, contributing to large-scale quality assessment studies and academic publications. Currently deepening expertise in data infrastructure—exploring ETL pipelines, data warehouses, and scalable systems—while seeking opportunities to apply and expand skills in Python and SQL within a data engineering context. Strong communication skills, attention to detail, and a track record of delivering practical, reliable solutions across diverse technical domains.

Experience

Nexus ALKÜ
Co-Founder | Software Engineer
May 2025 - Present (1 year)
Alanya, Antalya, Türkiye

- Co-founded NEXUS, a non-profit technology community (100+ engineers), and currently leading an 8-person managing board to uphold and execute the organizational mission and values.
- Serving as a Software Engineer, I am actively developing and implementing IT solutions and bringing together 5 project teams working on 5 real-world project ideas.
- Directing operations and logistics for 12 educational events, cultivating a culture of high-quality practice and skill transfer among computer engineers in Alanya.
- Establishing and maintaining a sustainable, growth-driven environment, empowering engineers to transform theoretical knowledge into practical, collaborative solutions.
- Driving community growth by fostering a culture of networking and exploration to ensure the sustained legacy of engineering excellence.

Konsalt Bilgi Teknolojileri

DevOps Intern @ Konsalt Bilgi Teknolojileri

August 2025 - September 2025 (2 months)

Kadıköy, İstanbul, Türkiye

- Implemented 5 CI/CD pipelines using Jenkins to fully automate the build, test, and deployment processes for several simple web applications.
- Configured a 3-node Kubernetes cluster from scratch on Linux/Ubuntu virtual machines, managing SSH access and k8s node networking.
- Applied a GitOps approach on a 3-node cluster using ArgoCD to enforce cluster state and manage advanced rollout strategies for deployments.
- Containerized 5 distinct web applications using Docker and utilized Helm Charts for application packaging, including setting up networking between containers.
- Gained practical experience in Linux Server administration and infrastructure automation, ensuring 99.9% uptime for critical internal development services.

Universidad de Castilla-La Mancha

Data Engineering Intern @ Alarcos Group

June 2025 - August 2025 (3 months)

Ciudad Real, Castile-La Mancha, Spain

- Created several scalable and extensible database schemas to accommodate research data workflows.
- Built ETL processes to collect, clean, and integrate data from 5 researcher hub APIs, spreadsheets, and experimental sources. Used advanced deduplication techniques.
- Created structured datasets for 40+ researchers that are likely to be stored long-term and easily queryable relational databases and SQL.
- Involved in the development of web-based data interfaces to visualize and manipulate research datasets.
- Worked with researchers to relate data models to experimental and publication requirements.

AGH University of Krakow

Data Science Intern @ Quality of Experience Lab

July 2024 - May 2025 (11 months)

Krakowski, Małopolskie, Poland

- Accelerated video processing by 70% (from 14 hours to 4.2 hours) by parallelizing FFMPEG on 6 lab machines.
- Automated 90% of pre-processing and organization for 600+ video sequences using Python (pandas/NumPy) and FFMPEG.

- Improved dataset validity by filtering 65% of noisy responses using ITU-T P.910 outlier detection.
- Achieved 90% participant completion rates by designing optimized Prolific experiments.
- Increased data organization efficiency by 60% through automation of the Python ETL pipeline.
- Produced 100+ publication-ready visualizations (Matplotlib) for research papers.

Freelance | Self Employed

Freelance Web Developer

October 2023 - March 2024 (6 months)

Alanya, Antalya, Türkiye

- Developed 6+ front-end-heavy web projects for local businesses and Upwork clients using ReactJS and Firebase (full-stack).
- Delivered responsive UIs and implemented real-time databases, auth, and hosting, leading to 95% client satisfaction and 3 repeat contracts.

U.S. Department of State

Lead Teaching Assistant

August 2023 - September 2023 (2 months)

Antalya, Turkey

- Assisted in organizing every detail and running an all-inclusive creative arts summer program for 60-80 middle school students.
- Provided a fully English-speaking environment for 80+ students, including refugees and those affected by the earthquake, fostering creativity and inclusion.
- Organized and led an AI based Art generation workshop for groups of 15 students throughout the camp.

ANT Arge Teknoloji

Web Developer @ ANT Arge

November 2022 - September 2023 (11 months)

Antalya, Turkey

- Delivered 5 production-ready MVPs (React/Firebase), serving 2,000+ users and 100+ businesses.

Alanya, Turkey

- Improved user retention by 25% through React optimizations (from 3.2 seconds to 1.6 seconds load time), measured via Lighthouse.

- Streamlined a team of 12's workflows by implementing SCRUM methodology via Asana, reducing task completion time by 30%.

Education

Alanya Alaaddin Keykubat University

Bachelor of Engineering - BE, Computer Engineering · (September 2022 - June 2027)
